

OFFER N°: L26_01012 E7		Of 21/09/2026
Your reference: Our reference: AB		
Payment:	40% at the order, 40% at the delivery, balance by bank transfer at 30 days from the invoice date.	Messrs CLI04515 Infinity Health, SA Rua de França, nº 273, Bairro da Coop Maputo ()
Agent:		
Package:	Excluded	Tel. +258 84 877 0340 Fax. Attn. Mr. Jose Wilson wilson@infinityhealth.co.mz
Installation:	On your charge	
Transport:	Excluded	
Shipping:	EXW our plant	
Delivery:	16/17 work weeks from the order	Offer validity: 30 days
Warranty:	12 months EXW our plant	

The solution described below complies with the requirements reported in the document **URS-IIAM-35A003641-CP-03-2026-Item06-EN** with the deviations reported in the document **URS response rif off L26_01012**, integral part of the offer in subject

BUDGET QUOTATION

Following up your kind request, our best proposal herewith follows

Customized automatic labelling system model SYSTEM 1 PHARMA PLC SIEMENS, to apply a self adhesive label on the cylindrical products body loaded manually by operator onto the conveyor. It's made of:

- Varnished steel machine chassis with stainless steel panels, anti-vibration feet adjustable in height
- Conveyor system with splitted belts of dimensions **2500 x 142 mm** at variable speed, with guides and rules (**conveyor height to 900±50 mm**)
- Automatic labelling head model **ENERGY 100** for SYSTEM 1 PHARMA, made of:
 - . Unwinder assy with (adjustable) disk brake for label reel diameters up to 280 mm, with swinging arm
 - . Swivelling dispenser terminal assy with bar of 495 mm and stop photocell on terminal bar
 - . Clutch rewinder to wind empty liner diameters up to 250 mm, driven by the main driver motor
 - . Tastex trigger photocell
 - . **Leuze ultrasound photostop** on terminal bar with support
 - . Vertical microregulation with nonius position indicator.
 - . **Electronic expansion board to manage the Cognex camera.**
- Thermal print unit Videojet® **DataFlex® 6530** model to overprint the labels, with the following features and complete with:
 - thermal print unit with printhead of 53 mm
 - 8,4" colour display control panel
 - cables between the units
 - print speed 10 ÷ 800 mm/s (intermittent), 1 ÷ 1000 mm/s (continuous)
 - **print resolution = 12 dot/mm (300 dpi)**
 - **print area = 53 x 75 mm** (intermittent), = 53 x 300 mm (continuous)
 - ribbon foil length = 1200 m
 - communication ports USB-A, RS232, Ethernet
 - power supply 100 ÷ 240 VAC
 - **Bracket for Videojet Dataflex 6530 for SYSTEM 1 PHARMA**

- **Labels overprinting control on labelling head dispensing unit (OCV/OCR control – **NOT CFR21**) by COGNEX camera**, complete with:

- . **Cognex IS7800-353-50 camera**, monochrome, 800x600px resolution, PatFind, 7.2 GB + 8 GB memory on SD card, 1.7x performance, complete with:
 - . 8mm C-mount lens for IS7000.
 - . 5 meter ethernet communication cable.
 - . 5 meter power and input / output cable.
 - . Integrated white light for IS7000 with standard cover.
 - . Polarized cover.

. VisionView 9" touch panel **with customized support**

. 3 axes support with position indicators kit, to fit the camera on the dispensing unit

. Electrical panel with switch

The characters to be checked must be OCR-B with a minimum height of 1.8 mm (font size 7) and with a minimum gap between lines of 2 mm.

The characters must also be uppercase and alphanumeric (Latin alphabet).

Control valid for 2 lines of a maximum of 10 characters each and within a 65x40mm area

- Customized product rotation device **DRP H 90x400 mm**, to wrap the label onto the product, with support and sideboard

- Minimum and maximum loading control

- Labelling control by 2 UV photocells

- **Ejector by lever pneumatic cylinder, complete with customized chute (placed at 90° of the system) for the collection of ejected products, maximum load control device** and rejecting control

- Line stop contact for alarms

- Quick compressed air releasing in case of emergency

- **Customized tunnel safety guard** on the conveyor belt

- **Siemens PLC S7-1511 with WAGO I/O**

- CFR21 (users management and system variables)
- Production lot report in pdf format
- Events report (in the lot production) in pdf format
- Back-up & restore
- Machine OEE calculation
- Switch
- UPS module for controlled shutdown of the operator panel
- 4 Mb Memory Card module
- **Light tower at four colours + acoustic signal**
- I/O signals with the upstream and downstream machines

- **Touch panel ASEM 8,4"** (Windows based with remote control module) **with customized support** + **UPS device (uninterruptible power supply)** for the data management in case of black-out

- Hand book in Portuguese language and display in Portuguese language.
- Test conduction on n°1 product size included

Net Price (End User)

EUR 110.300,00

NOTE: We'll reserve the rights to modify the offer in subject as soon all the products, labels samples, **after the test conduction with some products/labels reels (already printed for test with the vision camera to confirm it or eventually not)** and the line technical specifications will be *entirely* available.

The labels have to react at the UV light for the proper labelling control working, NOT the products; and must have a customized zone for printing.

The printing unit Videojet and the Cognex camera are NOT validables. Only the I/O signals are considered in the validation process (they will be considered as a "black box").

The present solution requires the Etipack technical department approval in case of order: the labels reel/products and all the technical data are *strictly required* to process it. Confirmation of the offer by and charged to the Etipack technical department.

OPTIONALS

SPARE PARTS KIT FOR SYSTEM for solution without optionals	1,00	EUR 4.500,00
Training activities (excluding travel expenses, board, lodging and transfers)	1,00	EUR 900,00 per day
Test conduction for each additional product format change	1,00	EUR 300,00 For each product
Clarisoft for Videojet 6530	1,00	EUR 1.560,00
Disaster recovery	1,00	EUR 2.070,00
Translation of the Validation package from English language (standard) to Portuguese language	1,00	+ EUR 2.800,00

**Validation package for ETIPACK
labelling systems (level 2 – in English
language)**

1,00 EUR 9.700,00

The following validation process concerns only the Etipack equipment, and it does not include any third parts validation document about accessories installed on Etipack system (commercial printing units, inkjets, vision systems, barcode readers, etc...).

These accessories are considered in the Etipack validation process as black boxes, consequently just the I/O impact on the labelling system working will be tested.

In case of any third part validation document is required, an additional offer will be submitted on customer demand.

The activities of the standard validation process for the Etipack automatic systems regard the following phases (according to the GAMP5® guidelines):

1. **Planning:** definition of the specific requests for the system.
2. **Specification:** technical characterization of the designed system.
3. **Test Planning:** predisposition of the tests to be conducted on the manufactured system.
4. **Testing:** executive check of the system.

1. Planning

Before reaching an economic-commercial agreement, the customer provides Etipack with the system specification document, called URS (*User Requirement Specification*). This document outlines the desirable specifications that the customer intends to achieve. After a careful analysis of the URS by Etipack, an economic offer and the technical response to the URS are produced.

2. Specifications

If the Etipack economical/commercial proposal is accepted, the following documents are provided:

The FDS is the document that represents the result of the analysis of the customer's URS and concludes the *Project Qualification* activity. This document reports which specifications can be met, also showing how this could happen, through a sufficiently detailed description of the system and the final synthesis of the entire technical characterization phase of the proposed system. It also represents the management of users and access levels, production batch management modules and Audit Trail registration (if applicable).

Note: The P&ID documents are mandatory to compile the FDS.

3. Test Planning

During the machine manufacturing, Etipack provides for the following documents:

- **P&ID (*Positioning and Installation Drawing*):** it is the drawing and the layout that identifies the positioning and operating of the electrical, pneumatic, and mechanical systems. The drawing identifies each device into the system and its associated name. They are the *photocells/sensors position drawings* and the *pneumatics drawings* and positioning of the mechanical parts and position of pneumatic and mechanical devices, connection of pneumatic and electrical utilities.

Note: The P&ID documents are in English language

- **FAT Report (Factory Acceptance Test Report):** is the document that represents the result of the command activity, obtained by conducting verification tests at Etipack.
- **SAT Report (Site Acceptance Test Report):** is the document that represents the result of the testing/installation activity, obtained by conducting verification tests at the customer's site.
- **IQ (Installation Qualification Protocol):** it represents the result of the activity of test protocols preparation to verify all the system hardware configuration, its components, their connections, the power supply, the interfaces, and accompanying documentation.
- **OQ (Operational Qualification Protocol):** it represents the result of the activity of test protocols preparation to verify the system operation, the process options, the I/O signals (checks and outward signalling) management, both in regular and anomalous states, to establish in the end that the real system functioning effectively coincides with the expected one.

For the CFR21 part, the following checks will be performed:

- User management policy
- Audit Trail recording functionality (if the module is present)
- Backup and restore procedures for critical data, production recipes and Audit Trail recordings (if it is present)
- Production lot management functionality (if it is present)

Note: The IQ, OQ, FAT, SAT Report documents are in English language. The P&ID documents are mandatory.

- **PQ (Performance Qualification Protocol):** it represents the result of the activity of test protocols preparation, to verify the system performances for each combination of product format and label.

Note: the drafting of the PQ documents is English language. To draw up these documents, the P&IDs and the position indicator kits for the micro-adjustments and sensors present are essential

4. Testing

The acceptance tests are made by *not less* than two engineers, one from Etipack, one from the customer.

In case the customer does not purchase the *Specification* and the *Test Planning* documents, he must provide to Etipack the acceptance test reports and/or, more in detail, the FAT and SAT reports.

The *acceptance tests* are the following two ones:

- **FAT (Factory Acceptance Test):** it is made in Etipack site. It is the verification of all the previous documents. The activity duration depends on each product-label combination and on the number of tests the customer requires to execute:

Daily rate reserved to you, travel, board, lodge and transfer costs EUR 900,00
of the customer's employers excluded

- **SAT (Site Acceptance Test):** it is made on customer's site. It is the verification of all the previous documents. The activity duration depends on each product-label combination and on the number of tests the customer requires to execute:

**Daily rate reserved to you, travel, board, lodge and transfer costs
of the Etipack's employers excluded**

EUR 900,00

DATA

		PRODUCT to be labeled

TERMS OF SALE

Warranty

The machine warranty – based on a single working shift of 8 hours per day – is valid for 12 months starting from the delivery date. It covers materials and labour for every device manufactured by Etipack S.p.A. – Etipack from here on - except for the part subjected of wearing.

The warranty terms are intended Ex Work Etipack. Eventual travel, board and lodging costs of Etipack engineers will be on customer's charge.

The warranty is subjected to the following terms:

- The labelled products and the labels have to comply with ones agreed at the order time.
- The products and labels used in production have to comply with ones used for the machine testing.
- The machine using has to comply with the user's manual.
- The ordinary maintenance has to comply with what reported in the user's manual.
- The users have to be properly trained about the machine using.

Users and maintenance manual

The users and maintenance manual is provide in a single (1) copy for each machine. It consist of the electrical, pneumatic diagrams, the spare part exploded diagram, the 2006/42/CE compliance certificate.

Eventual further copies will be supplied at the cost of € 150,- each one.

The manual of commercial devices eventually used – consequently not manufactured by Etipack – will be available in the sole languages available by the supplier.

Packaging and freight

They are not included in the machine price unless they are not differently specified in the offer.

Delivery terms

Ex Work Etipack.

Machine unloading, set-up and services connection

They are on customer's care and charge unless they are not differently specified in the offer.

Delivery date

The delivery date reported in the offer is approximate. It depends on:

- Work loading at the order time
- Eventual purchased optional
- Payments timeliness
- Complete technical data availability at the order time
- Product and label samples availability – for each handled product-label couple – with unambiguous and precise location of eventual over-printed areas.

Payment terms

Eventual delay in the payments will entail the production locking and consequent delivery postponing. Nothing will be ascribable to Etipack.

Training, installation and set-up

Etipack suggests its Technical Service to install, set-up the machine and train the customer personnel.

An engineer will eventually provide the service. The price will be defined depending on the location and the required services.

The date has to be scheduled at the order time and confirmed within 20 days from the machine delivery.

Machine testing at our factory

An Etipack engineer will test the machine before the shipment eventually together with a customer's representative as acceptance, if required.

In case the customer presence is required his transfer, board and lodging costs will be on his own charge. The costs of factory acceptance test (if required) is proposed in the offer.

Etipack will require a written acceptance document at the end of tests and the shipment instructions.

Samples

The current offer is subjected to the Etipack approval as soon the product and label samples will be available (if they are not already available).

The product and label samples are anyway strictly required at the order time for the machine designing.

Eventual additional formats not provided at the *order time* are subjected to the Etipack approval. Format changes and/or modification with additional costs and delivery postponing – to be defined - could be required, even in case they can be handled.

The samples shipping costs are on customer charge.

Customer responsibility

The building working in the location where the machine will be installed, materials, installation support personnel, lifting systems and personnel, electrical and air services, materials to test and accept the machine, cleaning and lubricating agents and any other product not specified in the offer will be on customer's care and charge.

Jurisdiction

Any eventual controversy will be on the Monza MI, Italy court jurisdiction.

Technical conditions

The mechanical and electrical connections with the upstream and downstream machines will be on customer's care and charge.

The machine will be designed according to the Etipack technical specifications, unless differently agreed in writing.

Eventual layout and technical specification provided at the offer time could be revised on the detailed designing. In case of – and only if – the modification will affect in deep on the proposed solution Etipack will inform promptly the customer.

The solution in subject has been developed on the technical and commercial points of view based on the information and eventual received samples.

The information about the line, the handled products and the labels eventually omitted or different from what provided at the offer time will be considered as modification requirements. They will be consequently subjected to Etipack approval and could involve additional costs.

Disclosure terms

All the information and the documents received from Etipack – i.e. the offer, the layout, etc. – have to be considered strictly confidential and cannot be divulged.

Marco Parretti
Managing Director
Etipack SpA
